MOTORABLE ROAD REPLACING TREKKING TOURISM
The construction of road along the Annapurna circuit, in western Nepal, has drastically reduced the tourism based on trekking. Recent study reveals that the number of visitors that trek through the circuit has significantly declined which directly hits on tourism entrepreneurs. According to the President of Trekking Agencies Association Nepal, the magnificent mountains are the major factors that attracts the visitors but with the construction of motorable roads, tourism business of local people has notably dwindled.

SETTLEMENTS AT RISK
Three areas of Lamjung districts, western Nepal, have been exposed to landslide that was triggered by the 2015 earthquake in Nepal. With the risk of landslide in the areas, the District Disaster Management Committee of Lamjung has recommended the National Reconstruction Authority to relocate the settlements before the starting of monsoon. The Chief District Officer notified that if these settlements are not shifted immediately, there could be a great loss of lives and properties. However, the district administration office has formed a committee to act on disaster management.

ELEPHANT ENCROACHMENT

Most farmers of Singeygang, central Bhutan, had quit farming due to the encroachment of elephant (Elephas maximus). According to the locals, the elephants have damaged their crops as two of the stone walls that were built to block elephants were broken down due to heavy rain. They added that elephants and wild boar are the major problematic wildlife. So, to solve the problem the local people are installing an electric fence with the financial aid of the government and also urged the government for concrete walls.
